

# VISTAGREEN

THE FOREFRONT OF INNOVATION, ENVIRONMENTAL STEWARDSHIP AND SUSTAINABILITY

At Vista Professional Outdoor Lighting, we've always been at the forefront of innovation. But innovation for us isn't just about creating top-tier lighting solutions; it's about ensuring that our processes and practices are in harmony with the environment. We're proud to reintroduce VistaGreen, our commitment to environmental stewardship and sustainability.

## ZERO WASTEWATER DISCHARGE

We are proud to be the first manufacturing facility in Simi Valley to have a Zero Wastewater Discharge Permit. This means all our manufacturing process water is treated in-house, ensuring none is dumped into city sewers.

## ENERGY EFFICIENCY

We have replaced over 200 HID lights in our manufacturing facility and outside areas with more efficient LED lights, further reducing our carbon footprint.

## RECYCLING & WASTE MANAGEMENT

All our manufacturing scrap materials, including copper, brass, steel, and cardboard, are recycled. Additionally, we ensure that all hazardous maintenance waste, such as electronics, and oils, are disposed of in accordance with city guidelines.

## ECO-FRIENDLY MANUFACTURING

Our main powder coating paint line uses a Low Nox burner, undergoing biannual emissions testing to ensure minimal environmental impact.

## STORM WATER MANAGEMENT

We adhere to a written Storm Water Pollution Prevention Plan, ensuring that our operations do not contribute to stormwater contamination.
